

# Plato on Innate Knowledge, Draft 1

Harshit Chhabra

Plato argues that some knowledge has to be innate because humans understand some truths, (eg. Geometry) without ever learning about them. However I object that some knowledge is innate because we learn about truths, like Geometry by using our environment to understand what might be true about certain things. One might respond to my objection by arguing that that its impossible to understand truths from the environment unless you know them. I reply that this isn't true as our understanding has a psychological component, we can understand truths by learning from people we trust.
